

MAINTENANCE

Standard soap and water **generally** will clean your Floor Graphics. Over a period of time you may observe **shoe marks** or any other type of marks. Understand it is **only** on the top lamination and can be **cleaned** by the following process. Use standard 99% Alcohol to remove **minor scuff marks**. On embedded marks you may use Acetone, **with caution**. Apply a **small** amount of Acetone to a clean cloth rag and wipe the area of interest lightly until the mark is removed. Once the mark has been cleaned **immediately** apply a spray foam cleaner (**Ammonia Free Spray Away**) to **stop** the activation of the Acetone. We strongly recommend this process **only** when necessary.
